Dear Hiring manager,

I would like to throw my hat as an applicant for the open position at your company. I have the analytical mind necessary to write code and the big-picture mentality to make it innovative and unique. I also enjoy overseeing projects, organizing people and channeling them into areas where they can make the best use of their talents. I'm thrilled at the prospect of becoming a part of your team at Flagship and placing my abilities at your service.

A fascination for computers coupled with a keenness to learn their languages gravitated me towards a career in engineering from an early age. After producing stellar results in high school, I progressed towards pursuing Computer Science Engineering from Rajasthan University. I joined as a software engineer at India's foremost technology company, Infosys, in 2018, a role for which I had to undergo rigorous technical training.

My trajectory at Infosys has been one of upward growth. I honed my programming skills on the job, and was selected to be a part of a 'Platinum' project for an eminent Swiss banking client, UBS. My skill at providing effective business solutions won me a Certificate of Appreciation from the Head of APAC Technology within the first year itself; I was lauded for delivering customer-oriented solutions that reduced the turnaround time of our services by 75%. Never one to rest on laurels, I searched for further opportunities to grow and enrolled in a program for high-performing engineers to gain consulting experience in Infosys' consulting wing. I was among 160 out of the 4000+ participants, who successfully completed the program. My efforts have resulted in me being promoted twice within three years.

Working as an IT Technology Analyst in Infosys, surpassed clients expectations and was offered a chance to work with the SMEs at the client location. Working closely with the business end users provided me the opportunity to design automation frameworks to help Continuous Integration and Continuous Deployment workflows reducing the costs involved in the software development and improving the delivery time. Further made a proposition to adopt all the legacy services into the cloud which resulted in huge costs savings. I aspire to secure a position in your esteemed company as I love deriving root causes for challenging business problems and seek new opportunities.

Sincerely,
Rohit Tamra
